Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3662

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kahler in view of Schreiber et al or Yokota et al.

Kahler discloses a dispenser for test strips where the dispenser has a moisture-proof housing to prevent contamination of the strips (see the 'Summary of the Invention'). There is considered to be a "chamber" (76) which is sealed in a first position to permit a strip to be dispensed. This occurs by a single motion of the sliding of the mechanism (50). To provide Kahler's apparatus for an electrochemical analyzing means for the dispensed test strips, would be obvious not only as conventional analyzing devices used to analyze blood or urine fluid on test strips but either Schreiber et al discloses the use of an analyzer with electronic processor in the base or Yokota et al also discloses the use of an analyzer as commonly used in col. 1, lines 21-33 which both analyze test strips.

3. Claims 2, 3 and 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
4. Claims 15-19 are allowed.
5. Augstein is cited disclosing in col. 2, lines 18-21 the further use of an electrochemical analyzing means.
